

## Lab work #1.1

- Please create the own repository with `$ git init`
- Get the information about it with `$ git status`
- Begin tracking a new file with `$ git add`
- Please clone the Git linkable library called `<name>`, you can do so like this:
  - `$ git clone https://github.com/<name>/<name>`
  - `$ git clone https://github.com/<name>/<name> <new folder>`
- Recording changes to the repository
  - Committing changes
  - Moving and Removing files
- Working with Remotes by doing typical workflow: pull, status, commit, push
