

- Three years ago, the Japanese engineers announced that they will build a space elevator in 2050. He will deliver the goods to a height of 96 kilometers. Enthusiasts believe that they could weave the cable out of nanotubes. US firms Thoth Technology Inc. issued US patent for the creation of a space elevator, which aims - the launch into orbit of ships and rocket planes, according to [russia-on.org](http://russia-on.org). According to the creators, the lift height of 20 kilometers.
