

Физическая космология

Physical cosmology is studied by scientists, such as astronomers and physicists, as well as philosophers, such as metaphysicians, philosophers of physics, and philosophers of space and time.

Because of this shared scope with philosophy, theories in physical cosmology may include both scientific and non-scientific propositions, and may depend upon assumptions that can not be tested.

Cosmology differs from astronomy in that the former is concerned with the Universe as a whole while the latter deals with individual celestial objects.
