

## 6. BoardDiag Setting Detail(4)

4) Select model, port and target directory

The screenshot shows a settings window with three fields: 'AP Chipset' with a dropdown menu showing 'APQ8064', 'Com Port' with a dropdown menu showing '11', and 'Target Dir' with a text box containing 'D:\test\WF180L' and a folder selection icon.

1. Model Name

- Selects the Qualcomm chipset used by the model under testing.

2. Com Port

- Go to the Device Manager for a check. Selects the USB port # connected to the terminal.

3. Target Dir

- Selects a folder to save the images extracted as in Image Extraction.

5) Testing

1. Start

- Select all items required and click START for diagnosis.

2. The progress is displayed in the status window.
