# 6. BoardDiag Setting Detail(1)

1) Image Extraction

   - Extracting images needed for diagnosis SW to download on the terminal from each model's Binary tot file

   - Ex.) As for F180L, images are extracted from LGF180LAT-00-V20j-LGU-KR-JAN-22-2013+0.tot.

1. **BIN** : Selects a Binary tot file for each model

   Ex.) LGF180LAT-00-V20j-LGU-KR-JAN-22-2013+0.tot

2. **DIR** : Selects a folder to save the images extracted from the Tot file.

3. **Extract** : Starts extraction.

4. On completion, "**Complete**" pop-up appears.

<**Important 1**>

If you did Image Extraction once per a model, you don't have to extract again because you already made "Target Directory" for the model.

<**Important 2**>

BIN or DIR's folder name and its path name SHOULD include English characters only.

Using other characters except English or special characters will cause unexpected errors.
