

A microscopic view of snowflakes, showing their intricate, six-sided crystalline structures. The snowflakes are densely packed and exhibit a variety of shapes, from simple hexagons to more complex, branched dendrites. The background is a dark, textured surface, likely a glass slide, which makes the white, crystalline snowflakes stand out prominently. The lighting is bright, highlighting the sharp edges and facets of the crystals.

**Итог:** - мы рассмотрели снежинки и поняли,  
что не бывает двух одинаковых;  
-познакомились с тремя состояниями  
ВОДЫ.
